Willy Garcia

Production Engineer

PetroTal (<http://petrotal-corp.com/>)

This letter is to reference Triol's products that PetroTal is using in its field operations in Block 95 located in the Peruvian Forest, South America.

Product Names:

- 1) Medium-voltage (4,16kV) drives "Triol AT 27" for controlling Horizontal Pumping System with motor of 1000 HP (800 kW) rated power.
- 2) Variable Speed Drives "Triol AK06" (480V, 620kVA, 800A) for controlling ESP motors at oil-producing wells.

1. Units installed on the field:

The 2 units of each products have been installed during 2019.

The "Triol AT 27" units have been supplied at Nema 1 enclosure and installed at shelter.

The "Triol AK06" units have been supplied with Nema 4 protection and installed outside.

2. Location of Products installed:

Bretana oil field, located in block 95, operated by PetroTal in Peru.

3. Quality reference, problems and good sides.

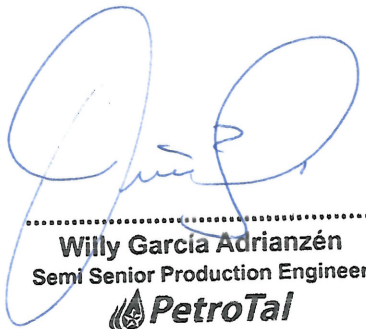

The only issue was only with concerns about switch-gears compatibility to "Triol AT 27" MVDs at time of projecting, construction and installation works. This issue was solved immediately upon our concern was expressed to Triol and the Switching Cabinets "SB27" were supplied by Triol on prompt basis.

All equipment is in operation and meets expectations, especially, in view of the jungle environment conditions with high humidity.

Good sides: the technical support, technology, and fulfillment with the technical specifications.

4. General experience of the work with Triol (technical support, management etc).

Excellent support. PetroTal's team expressed the conformity with Triol's products as well as the intention to continue and extend use of Triol's equipment for PetroTal's production purposes.
